

M-5000 PAYMENT PROCESSING SERIES

MODULAR DESIGN - PAYMENT PROCESSING TRANSPORT

Maverick designed the MICR V series of products to meet your check encoding and payment processing needs. The desktop modular design allows you to tailor hardware and software configurations to meet your information capture and encoding technology requirements. The product features include MICR or OCR read, dual image capture, power encode, and multiple sort pocket configurations.

Our design allows you to configure the image camera modules for upstream image capture or downstream image capture. Hardware modules include Autofeed, MICR / OCR Read, Image (Front only with Magnetic Read, Front & Back), MICR Encoder with programmable ink jet Endorsement, and a 3 pocket sorter module that allows additional 3 pocket modules as needed.

Combined with Maverick's PPS software (Payment Processing Suite), the M-5000 series supports all standard payment processing functions:

- Check Processing Applications including One Pass POD & Two Pass Image Keying with Power Encode
- Image Archive and Retrieval
- Remittance Processing and Lockbox Applications

Maverick's M-5000 series offers you an affordable check processing platform to implement ECP (electronic check presentment) in a distributive environment. By implementing ECP, the check clearing process is accelerated by at least one day, while reducing risk associated with REG CC's impact on the allowed hold period for check deposits.

Implementation of ECP is a minimal impact to current operations. While processing payment transactions through the M-5000 transport, the check's MICR code line is captured as checks are amount encoded and payment transactions are balanced. The presenting bank transmits an ECP file (data captured from the MICR code line) along with an Electronic Cash Letter to the paying bank, while continuing the presentment of paper checks via ground and air transportation. The paying bank receives the checks and reconciles them with the electronic items to determine missing items and initiate the return process.

M-5000 Payment Processing Series

Description

Legend

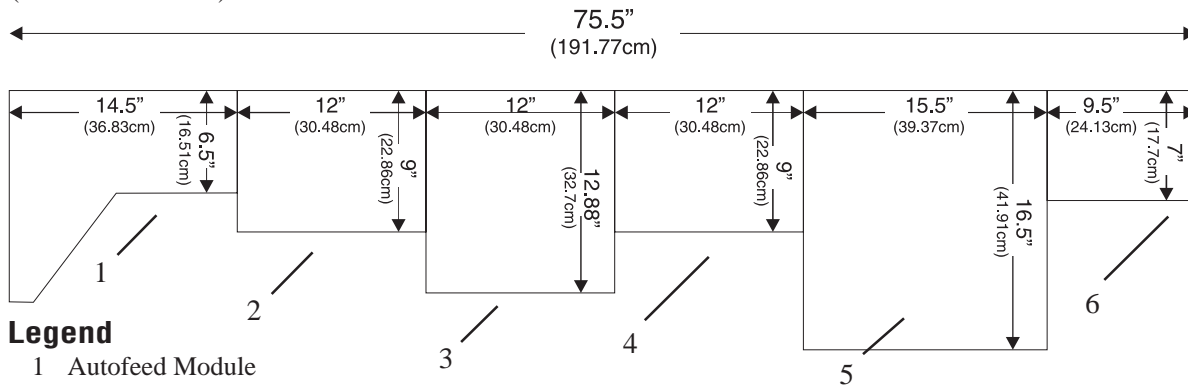

- 1 Autofeed Module
- 2 Image Module
- 3 Encoder / Endorser
- 4 Image Module
- 5 Sorter Module

Description

The compact size of the M-5000 Series allows a user to easily integrate the Multipurpose Document Processing Platform into their office environment. The base module of the M-570p has a footprint of only 12 inches wide x 12.88 inches deep (30.48cm x 32.7cm).

The dimensions for each of the modules is outlined below. Not all modules are required. Shown below is a fully configured M-5000 System.

Legend

- 1 Autofeed Module
- 2 Image Module (Front only with Magnetic Read or Front and Back)
- 3 Encoder / Endorser (E13B, OCR, CMC7 font / Ink Jet dot matrix)
- 4 Image Module (Front and Back or Front only with Magnetic Read)
- 5 Sorter Module (3 pocket configuration – may connect up to 4 modules)
- 6 Catch Tray (Optional catch tray is a 4th pocket)

Nationwide Sales and Customer Support

The full line of Maverick Products are sold and serviced nationwide by a highly trained and professional network of Maverick Distributors. For more information about the Maverick M-5000 Payment Processing Series and other Maverick products, please contact your local authorized Maverick Distributor or the Maverick corporate office.
