

## i2Teller

Ever wonder what the word 'integrated' really means? According to Webster's dictionary 'integrated' is an adjective that means:

- combining or coordinating separate elements so as to provide a harmonious, interrelated whole
- organized or structured so that constituent units function cooperatively: an integrated economy.

According to Integrated Bank Technology, 'integrated' means exactly the same thing! From the moment that the customer presents the transaction to the teller at the counter the items are scanned into IBE and immediately 'integrated' into the following processes:

- Balanced before the transaction can even be committed (thus, eliminating the need for the majority of your back office proof processing!)
- Immediately becomes available for viewing and research not only in Net Banking for customers, but also within Check 21 POD product for every employee within the bank!
- Transit items are pulled for automatic creation into an X9.37 file for FEDsend
- Images are sorted and compiled by customer for inclusion into imaged statement production
- Customer balances are updated instantly providing a real time environment.

In fact, there are so many other ways in which our Integrated Image Teller system is fully integrated that we would quickly run out of space on this web page! But, just to peak your curiosity let's name a few more. How about electronic printing of official items with integration into a monetary instrument log for required transactions? Or online teller and drawer alerts for monitoring transaction limits and dollar amounts? Or electronic remote supervisor override? Or.....get the picture?
